Summary

Frontend engineer with 5+ years of experience building React.js interfaces focused on real business impact — not just shipping components.

As the sole frontend engineer on a B2B health platform serving 1,000+ client companies and 25,000+ users, I owned every frontend decision end-to-end — including the technical planning to replace a legacy iframe structure with a role-based SPA, scoped with the backend team as a 9-phase, ~430-hour roadmap.

The work I'm most proud of solved operational problems, not just UI ones: a full checkout rebuild in React with dynamic dependent addition and real-time cost recalculation, which turned a broker-dependent process into full self-service and ended daily support interventions across the client base; and a financial statement module built from scratch with reused components, giving account holders direct access to data that previously required a broker — now a go-to resource during income tax season.

Beyond my main role, I run Timecode, where I've delivered 10+ web projects and built a multi-tenant Website-as-a-Service product on React and Node.js — from idea to production, solo.

Currently seeking frontend opportunities in international teams where product thinking and technical ownership matter.

Experience

Frontend Software Engineer

Coffee Code | São Paulo, Brazil (remote)

02/2022 – 07/2026

- Orchestrated the technical strategy for migrating a legacy iframe architecture to a role-based SPA. Defined a 9-phase roadmap totaling ~430 hours in collaboration with backend engineers, encompassing routing, API layers, and permission-based dashboards — establishing a documented execution framework in Notion for long-term scalability.
- Rebuilt the entire logged-in checkout flow in React to support dynamic dependent addition, replacing a manual broker-dependent process. Engineered real-time cost recalculation via Context API, a custom multi-step form loop with schema-based validation (Yup), and a fully tailored order finalization via custom endpoint. Eliminated daily support-team interventions across 1,000+ client companies, enabling full self-service enrollment.
- Built the financial statement module from scratch in React, reusing existing components to keep bundle size lean. Delivered direct visibility into account holders' financial history — previously handled manually through brokers — becoming a key resource for clients during annual income tax filing season.
- Improved order queue management by surfacing error visibility on TOTVS ERP API failures, contributed to the frontend TOTVS integration, and developed custom Gutenberg blocks enabling dynamic content control per company and user segment across the platform.

Skills: React.js, React Hooks, TypeScript, JavaScript, Context API, Redux, Yup, RESTful APIs, Node.js, Jest, WordPress, PHP, Git, Agile

Founder & Full-Stack Engineer

Timecode | Governador Valadares, Brazil (remote)

04/2025 – Present

- Architected and shipped a multi-tenant SaaS platform in React 19 and TypeScript with a Node/Express backend — host-based tenant resolution, per-tenant routing and theming, and isolated data access.
- Built an LLM content-generation pipeline with schema-validated structured JSON output (Zod), provider failover and retry/backoff; profiled and tuned provider routing to cut p50 latency from 60s to 5.7s.
- Integrated Stripe billing (Checkout, Customer Portal, signature-verified webhooks) as an idempotent, event-driven state machine resilient to retries and out-of-order delivery.
- Own infrastructure and delivery end-to-end: Docker Compose and Nginx on ARM64, GitHub Actions CI/CD, Cloudflare CDN, and server-side rendered meta tags for crawlers on custom domains.
- Delivered 10+ client web projects end-to-end, from Figma handoff to production deployment, across varied niches and tight timelines.

Skills: TypeScript, React.js, React Hooks, Node.js, Express, Next.js, RESTful APIs, Zod, SQL/SQLite, Docker, Nginx, CI/CD (GitHub Actions), Cloudflare, Stripe, LLM/API Integration, Vite, Git, Figma

Frontend Software Engineer

Grupo KPG | São Paulo, Brazil (remote)

08/2021 – 11/2021

- Developed landing pages for Pedalgel, Brazil's pioneering foot-activated hand sanitizer dispenser, translating Figma designs into pixel-perfect responsive pages with an integrated external checkout flow. The product sold 60,000+ units and was exported to 10+ countries, including the US, Canada, Japan, and the UK. Built with Next.js, SCSS, and CSS Modules, with cross-browser compatibility across desktop and mobile.
- Built additional web projects for the group's portfolio — including a digital entrepreneurship platform and a couples mentorship site — delivering across varied niches under tight timelines.

Skills: Next.js, JavaScript, SCSS, CSS Modules, Responsive Design, Cross-Browser Compatibility, WordPress, Figma, Git

Education

Bachelor Degree in Software Engineering – Ampli, Brazil (2024 - 2028)

Languages

English: Full professional proficiency — EF SET C1 (2024)

Portuguese: Native

Licenses & certifications

[React from Scratch to Masters \(w/ hooks, router, API, projects\)](#) – Hora de Codar, 2024

[JavaScript from scratch to Advanced](#) – Udemy, 2022

Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, PHP

Frameworks & Libraries: React.js, React Hooks, Next.js, Node.js, Express, React Router

State Management: Redux, Context API

APIs & Data: RESTful APIs, GraphQL, SQL/SQLite, Stripe, LLM/API Integration, Third-Party Library Integration

Testing: Jest, React Testing Library

Forms & Validation: React Hook Form, Yup, Zod

Practices: Responsive Design, Cross-Browser Compatibility, Web Accessibility (WCAG), Frontend Performance Optimization, Agile / Scrum, Code Review, CI/CD

Infrastructure & DevOps: Docker, Nginx, GitHub Actions, CI/CD, Cloudflare, Linux

Tools & Platforms: Git, GitHub, Figma, Vite, WordPress, Notion

Additional Information

Open to global relocation and remote opportunities.
